In LiDAR, laser light is sent

from a source (transmitter) and reflected from objects in the scene.

The reflected light is detected by the system receiver

and the time of flight (TOF) is used to develop a distance m

ap of the objects in the scene.

What is LiDAR and How Does it Work? - Synopsys

The object-wise feature extractors project LiDAR point clouds

into 2D representations and generate the object proposals using 2D net

works.

Then, they regress the region proposals to predict the 3D bo

unding boxes.

A Survey on Deep-Learning-Based LiDAR 3D Object Detection for ...
