span h2 div span To check for the existence

of a limit of a function at a point, you can use the following conditions:

span h2 span div div div div

div div div div span div The function must

be defined in a punctured neighborhood of the point.

div div div div div div div

div div div span div The limit of the function

as it approaches the point must exist and be finite.

div div div div div div

div div How do you know a limit does not exist? In short, the limit

does not exist if there is a lack of continuity in the neighbourhood

about the value of interest.

Recall that there doesn't need

to be continuity at the value of interest, just the neighbourhood is required.
