Traces of proteins found on letters he wrote in 1457 and 1475 suggest he suffered from respiratory , and skin diseases a

nd could have had a condition known as hemolacria, which is when blood gets mixed in with , tears. The findings add one more facet to

the ruler's spine-chilling reputation.

It is

suspected that prince Vlad suffered an , erythropoietic porphiria, which could be the reason for the development of certain peculiar characteri

stics of the vampires.
