BTE (Bachelor of Textile Engineering) is a term commonly used in the field of audiology. In Brazil, BTE is a common term for Behind The Ear hearing aids, or Tragus of the Ear devices. These devices are used to assist hearing in individuals with hearing loss. They are located behind the ear and connected to the auditory canal through a tube or a custom-molded earpiece. BTEs are used primarily for mild to moderate hearing loss and are known for their flexibility and versatility. They come in various styles, sizes, and colors to meet the needs of users, providing comfort and ease of use.

Abreviações na Indústria da Audiologia

- CHL: Perda Auditiva Conduíva
- CI: Implante Cohlrear
- CNR: Redução Nasal Fechada
