Running a VM on a NAS takes a lot of resources so you would need to choose one with good processor and RAM

. An alternative ( if you want to run a virtualized Linux app ) is docker. both Qnap and Synology have Docker support which takes very little system resources .

What Is Network-Attached Storage (NAS)? A Complete Guide

The baseline functionality of network-attached storage devices has broadened to support virtualization.

High-end NAS products might also support data deduplication, flash storage, multiprotocol access and data replication.
